

# Premium diagnostics: the new Carman Auto-i 700

The Carman Scan Auto-i 700 is a world-class diagnostic scanner with 7-inch high-resolution colour touch-screen with a Windows operating system. It is a rugged, shop-tough, tablet-style specialist vehicle tester that covers a vast range of vehicle systems with in-depth diagnostic capabilities.

The Auto-i 700 tool builds on 25 years of Carman Scan heritage that has continually evolved to keep up to date with the latest technology. Carman says it's truly the very best Asian tester on the market and also covers a wide range of European, American and Australian vehicles, plus 24-volt truck applications.

It says the full-colour screen offers excellent graphics in all light conditions and the quick operating system makes it a serious player in the professional diagnostic market.

### Fast, easy, reliable, smart

The Auto-i 700 runs a powerful Cortex A8 1GHz M3 120MHz processor and Carman says it is a truly impressive tool with an optimized user-friendly menu and time-saving features like, 'Favourites' and 'Recent System' for all your frequent functions, plus full text descriptions for DTC and live data. The vehicle software is easily kept up to date via automatic wifi updates directly from the Auto-i server. Other features include:

- Quick searching, screen capture and memo for report reference.
- Flight record and replay in numeric or graphical form.
- Electronic control unit (ECU) coding and programming, real-time live data text capture, vehicle maintenance information and vehicle diagnostic-plug locations.

The built in lithium-ion (Li-ion) polymer battery allows users to power up the tool and start the vehicle selection process prior to taking it out to the workshop or review and print data once disconnected from the vehicle.

### The package

The Carman Auto-i 700 kit includes the 'Basic' kit plus the 'Australia' pack, containing the plastic blow-moulded carry case, power-supply cables and battery chargers, OBDII connector and a vast range of plugs and cables to suit older Asian and Australian vehicles, plus three years of software updates.

### Carman Auto-i 300

Carman says the Auto-i 300 is next generation of intelligent laptop or tablet-based diagnostics, suitable for users who prefer to run their diagnostics on a laptop or tablet via Bluetooth. It has the same diagnostic system and connector pack as the i 700 but is supplied with a Bluetooth VCI unit and software to load onto your choice of tablet or laptop.

If you already have an older Carman scan tool or Gscan, you can use your old case and connectors and simply purchase either the i 700 or the i 300 in an OBD (on-board diagnostics) pack.

Elevating work platform fitted to the workshop pit operated by a hand-held radio remote control.

Newly commissioned pit

"Wet" pit with grated platform

Adjust height to suit vehicle

Adjust height to suit mechanic

### Proven to increase workplace efficiency & productivity

- Fastest access to vehicle undercarriage.
- Using hand-held radio remote, platform adjusts quickly to ideal height
- Service crew can access vehicle undercarriage, body and controls at the same time.
- No need to unhitch trailers.
- Equipment can accompany mechanic on platform.

### Reduces workplace hazards

- Platform acts as pit cover.
- No obstructive lifting equipment.
- Heavy machinery stays safely on the ground.

### Safe, reliable and simple

- Multiple safety features.
- Quick and easy maintenance.
- Minimal operator training

### Cost efficient

- Minimal servicing using readily available non-specific parts.
- Low running costs.
- Long life asset.

### Versatile

- Custom designed to suit.
- Suits all vehicle types.

### Improves facilities

- Aids mechanic posture and comfort.

### Accessories

- Mobile steps, gear box jack on trolley, removable mobile bridge.
