DIGITAL INSPECTION VIDEO SCOPES

The premier Autel line of MaxiVideo digital video scopes are ideal for examining difficult to reach areas that are hidden from plain view. They feature the ability to record either still images or video. These files can be stored on the video scopes internal flash memory or on the removable Micro SD card (optional). These ergonomic tools feature either a 2.4" or 3.5" full color digital LCD screen, a choice of regular or built in rechargeable battery, auto focus and a viewing capacity as close as 1 inch with crystal clear output. They also offer the capability to stream digital video directly to your computer with the supplied USB cable. MaxiVideo digital video scopes offer an economical solution to inspect those hard to see areas with its long 1 meter (39.4") semi rigid shaft that has autofocus and a powerful built in LED to illuminate those hard to see dark places. See the comparison chart to the right to find out which video scope is right for you.
