

TOOL TESTS

Interequip Carman Auto i700

REVIEWED BY ADAM WATKINS

Interequip has released a software upgrade for the Carman Auto i700 that enables the user access to Subaru diesel engine ECU functions such as engine oil reset, injector coding and Diesel Particulate Filter (DPF) regeneration as well as accessing the SRS system. For some time now only a few scan tools have been able to access these functions on Subaru diesel engines making servicing and repairing these vehicles difficult.

With the assistance of the Northern

Sydney Institute Northern Beaches Campus Automotive faculty, Interequip and their software engineers developed and tested the software for the Auto i700.

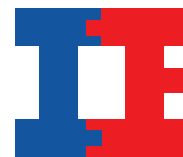

The vehicle used for testing the DPF regeneration function was our Subaru Forester, which is driven around the Campus but also has extended idle time during student activities.

During the successful test we were surprised at just how blocked the DPF was! This was a good experience for our students to see how software is developed for aftermarket scan tools and the testing that happens behind the scenes.

With the new software update we are able to expand the scope of learning activities for our students when using the

Subaru Forester, giving them a positive learning experience.

This is a good example of TAFE and Industry working together to provide not only practical training for upcoming automotive technicians but also developing repair solutions for aftermarket automotive workshops.

To upgrade your Carman Auto i700 contact Interequip on 1800 037 847 or 1800 EQUIP, visit www.interequip.com.au or send an email info@interequip.com.au
